

# 1200mm T8 / T10 Tube Replacements

BL-T8CW1200F (Cool White)

BL-T8WW1200F (Warm White)

**BRITE LED TECH PRODUCT**

5 Year Warranty

**Main Beam at 180 Degree**

240v AC 240 SMD led tube replacement for conventional flurescent tubes, this tube will straight replace to conventional tube though will need electrician to remove original starter and bypass as per image below, this tube is made to offer the same lumens as the conventional tubes though do not get confused with the lumens ratings of conventional tubes for example if a standard 1200mm tube is rated at 1600lm half of the lumens are aimed to ceiling and being wasted with only 3/4 of tubes lumens being fully used and upper half only half lumens used meaning to get the same amount of lumens from a led replacement you only need  $\frac{3}{4}$  of the original fluoro lumens rated for eg:

## Example only as all Fluro tubes are rated different by manufacturers

Original 1200mm fluoro tube = 1600lm total

800lm seen from floor that you see when looking at tube

800lm shining upto ceiling though only 400lm seen from floor after reflection

= useable light from conventional fluoro 1600lm tube = just 1200lm

This 1200mm 240 smd led tube will offer 1320lm of useable light as all light shines at 140 degree

This example shows if you are chasing lumens to compare only sometimes you are looking at the calculations incorrect so always ensure you calculate for the correct lumens you really need.

supplied with a 5yr warranty. available in cool white 6000-7000k or warm white 3000-4000k.

Cool white Offers 1320LM and Warm white offers 1220lm

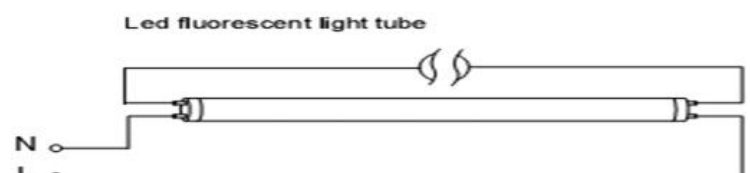

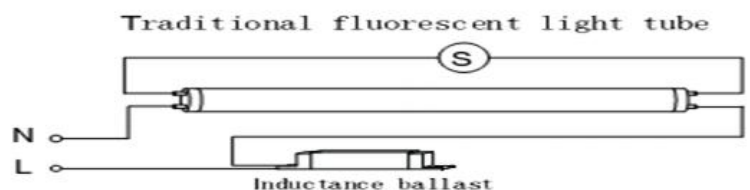

1 Lamp kit/box

Power consumption is a low 16w

Easy to Installation by qualified electrician

Can be used for Many Applications such as:

- Home and office
- Restaurants
- Showrooms
- Advertisement lighting

For example only as all are supplied with frosted lenses so leds are not visible
