

# 12v Motion Day/Night Sensor

BL-SEN12V

## BRITE LED TECH PRODUCT

12v Day/Night Motion sensor with 2 screw adjustments

1, for time setting so when motion sensor is activated you can adjust the time for how long sensor will be activated for with a closed circuit keeping eg light on for

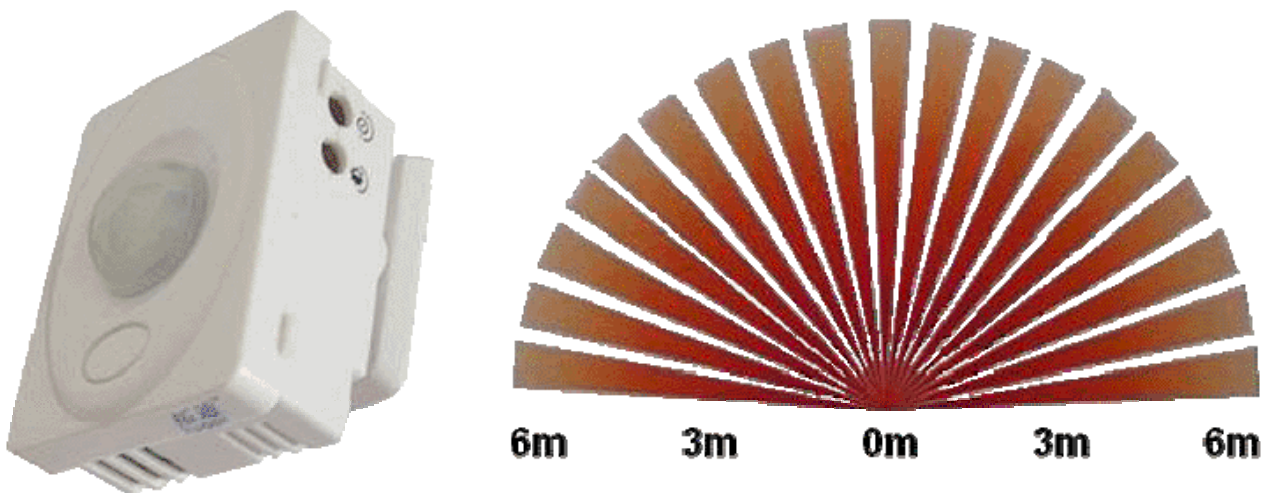

2, for adjusting day night sensitivity so can adjust simply when gets dark the sensor will activate and stay closed circuit eg: light will come on or can simply adjust so that it controls the sensitivity of detecting motion while dark to ensure light for example will only activate when you want it to.

Sensor has a 3 screw hole connection being 12v DC positive in with a single positive out and 3<sup>rd</sup> terminal being a common earth.

The sensor can control output up to 6amps which is a lot when you calculate that many interior dome lamps draw less than 0.5amp meaning you could in fact connect many led lamps to the 1 sensor.

There are many applications for this sensor such as security lighting, pathway lighting sensor, for caravans and motor homes,, for outside front entrance motion sensing, sensor for operating lights in toilet, kids bedrooms, etc

Packing: 1 kit / bag

**Sensor can view 180 degree with 6 meter spread**

**Pack consists of 2 mounting plates for either solid mount or swivel mounting for wall or ceiling**
