

12V REVERSE SENSOR

Part No: REVSEN

1 Year Warranty

12v Reverse sensor which is a very easy do it yourself kit, comes complete with main control box which has a input for the 4 rear sensors, supplied with power lead which you just connect red to the reverse light wire in boot and a earth wire, also has a 3 light stage display for visual and also emits sound for how close you are getting to objects and if the noise is distracting then you can even turn off the sound by switch on the display and just use the visual aspects of the sensor system,, kit also includes the 21mm hole drill for the rear bar sensors,, sensors we supply are black only and you can just spray paint them if need to change the colour to match your rear bar, kit comes with easy to follow steps to complete the job of install but is very easy with everything done in the boot space and display has a 6 meter lead so you just need to run the display wiring from the boot to the dash and your done.

the dash display has a 3m adhesive base and the main control box for in boot also has a adhesive pad base and 2 mounting holes.

below is what is included:

1 x 12v Control Box with adhesive pad

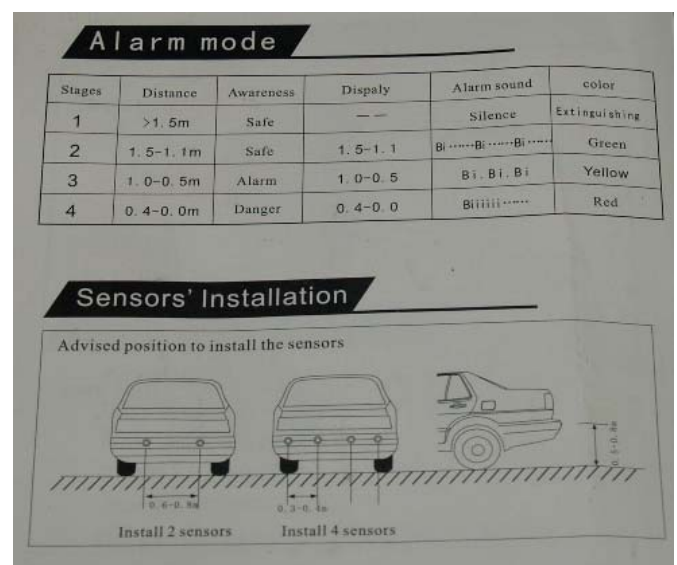

1 x LED Dash mount display with adhesive pad and 6 meter lead

1 x 21mm hole saw to suit sensors

4 x black motion sensors each with 2.5 meter leads

1 x Power lead 800mm long

all in 1 display box as shown

Offers 4 stage warning sequence keeping in mind as the power wires are connected to the reverse light wires the unit will simply only operate when you are in reverse this will aid in the dash display not effecting you while normal forward driving.
